Relationships
between
classes

- In OOP it is common for object of different classes to collaborate with each other.
- Objects interact with each other.
- e.g an object needs to read something from the keyboard so it will use cin object.

- There are mainly 3 types of Relationships:

1. Composition
2. Agregation
3. Inheritance

- In a case study:
  step 1: Identify classes
  step 2: identify relationships.
